

Job ad – December 2021

Victorian Chapter

Laboratory Planner and/or Senior Architect

‘A unique opportunity for an architect looking for employment with a difference – to become an expert in the Architecture for the Controlled Environment.’

L2D is a small boutique architectural practice specialising in the design of controlled environments – notably around Research Architecture. L2D are seeking architects with a strong interest in Research design.

Given Australia’s and the World’s shifting focus to Science and Technology and the resultant opportunities that it offers to architects - L2D offer a truly exciting opportunity to be part of this changing world. We are very proud of our contribution to the design of buildings that have enabled Covid research and outcomes for human health and those that address Global Warming and mitigation strategies and products. Our project portfolio reflects a comprehensive portfolio of clients in Research Institutes such as the CSIRO and The Walter & Eliza Hall Institute, as well as many of the Australasian Universities where L2D supports the design of their research workplaces and high tech manufacturing capability. The primary focus of our business is the design of facilities for science based human, animal, plant research and high-end specialist platform technologies. Even with this focus, our projects are diverse, as are our project locations.

In August 2021 we moved into a brand new office fitout in 41 Exhibition Street in Melbourne – opposite Collins Place (sharing the building with the likes of the AIA !!).

Applications consisting of CV and portfolio images can be sent digitally (PDF, max. 15MB) to Colin@L2D.com.au.
