Architecture Education

WHAT is archi ed?

archi ed is a task group of the SA Chapter of the Australian Institute of Architects.

We want to encourage an appreciation of architecture and the built environment in school students and the wider community. We want to inspire future generations by introducing them to the world of architecture, the thinking behind architectural design and the many factors that contribute to what, where, how and why buildings are constructed.

We want to make connections between architects and schools so that presentations about architecture, design and the built environment can be given to a school group by an architect.

How YOUR SCHOOL can be involved...

A presentation can be tailored to fit in with and contribute to delivery of the SA curriculum. It can be:

- Front of class talk
- Interactive discussion
- Maker session
- Something else (architects are very adaptable)

Please contact sa@architecture.com.au to find out more

Architecture Education

Some more about us

From big picture thinking to the smallest detail, architecture combines creativity, environmental awareness, science and technology, and is integral to the fabric of the built environment sitting within the natural world and its historical and cultural context.

An awareness of these factors will encourage an appreciation of the built environment and enhance that environment for future generations.

Architecture brings together:

- Creativity and design
- Environmental awareness
- Science and Technology
- Engineering and Maths
- History and Culture
- Big picture thinking and tiny details
