*Is the myna herald of “spring”?*

*Mynas aggressively compete with native fauna for nesting sites, reducing habitat for native birds. They threaten other birds, often mobbing them in large groups.*

-- NSW Department of Planning, Industry and Environment. *How do I deal with Indian mynas?* Website. Last Updated 1 September 2021. <https://www.environment.nsw.gov.au/questions/detering-indian-mynas>

*Feeding leads the mynas to thrive, threatening local birds' survival. Alternation causing decrease in native flora - an overall biological declination.*

*Tram driving, driving customers away from small businesses,  
driving people away from opportunities - the chance of meeting new friends.*

\*Wheel limited by magnetic system. Through carefully arranged ratios between gears, the ascension of food would cost approximately for 8 weeks, which is adequate for composting.

## Stage 1

The first step introduces the structure as a standalone object. People can nurture native floras while reducing the feeding for urban birds. Awareness of protecting native species would rise, while this new attraction spot would draw the public's attention from the tram.

*ALTeration for interest.*

## Stage 2

With more installations, the structures would fill the habitat blank between nature reserves, reintroducing local species. Local businesses could join this process, providing services to make spinning a rewarding experience that is full of discovery. People of same interest can raise conversation together, creating new friendship.

*an ALTitude for another living friend.*

Shopping Bags Counted

North to South

53

South to North

36

North is high,  
South is low.

## Stage 3

The final step would connect the installations via a cable system. Instead of carrying people, shopping bags and carriages, this system would take the bags only. It would have minimal energy cost, as the shopping bags travel from the higher to the lower part more here. People of different interests can form communities around the installations, overlaying to form a new community, which would replace the present system for transportation only.

*ALtered to live ALTogether.*
