

Repairment of Community and Environment through fragments of Paper

Albertina Ugwu | Frist Year | CDU

Programme: system trade of scraps for the benefit of environmental enhancements

The use of Paper has diminished with the growth of modern technology; however, our scraps still remind in the environments of our communities and are a by-product of the unnatural ego system of human production.

The By-product of mass production through facilities like; the Government Printing Office (Darwin), which has left a stain on Larrakia land since 1978 and abandoned since 2014, with no attempts to nurture or regenerate the land, its sense of community is absent from site and hence ghostly.

To repair the bond between community and environment as a coexisting ecosystem should then not deny the remaining fragments of former structures and products but acknowledge and help restore through its remaining produce and capture the essence of the site's unique flora.

With the remains of Paper, its scraps can cocreate and enhance through recycling and composting, engaging the community with the opportunity of participation through schools, workplaces, and general households, united by a system of trade, and creating healthy eco-existence of human relationships and environment.

This design system includes Architecture not with the refoment of a building but enhancing community participation in nurturing of nature. A positive step toward the reconciliation of Indigenous land.

design of program

Design of Product

Shredded paper for community compost garden

OR

Surplus of paper compressed for reusable paper

Design of Trade

Community waste

Ecological recycling

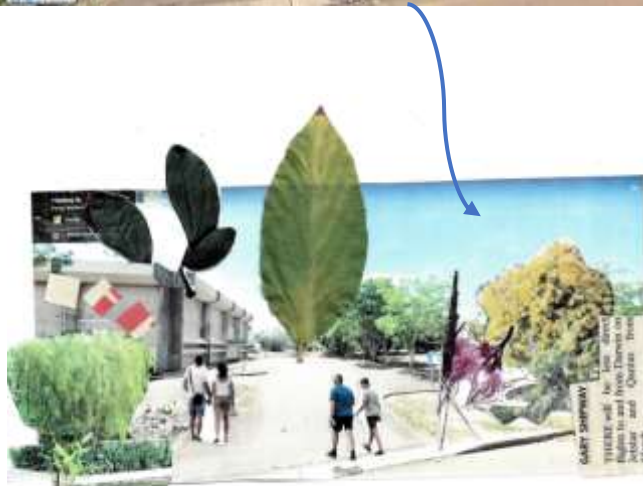

General regenerative design process

Connection SITE: NT GOVERNMENT PRINTING OFFICE
203 STUART HWY
PARAP NT 0820

Local Schools: Darwin High School
Darwin Middle School
Parap Primary School
Stuart Park Primary School
St Johns Catholic Senior College

Use of native plants like:

Figure 2: *Acacia dunnii*

Figure 1: *Callistemon* "Kings Park Special"

Visualisation of restored community

Restoring community with the use of the primitive charm of Biophilia, which has a profound effect on human interaction and nature.

Example:

Mindil Beach Sunset Market without human interaction

Mindil Beach Sunset Market with human interaction
