

## Architects Advisory Service

## CONSULTING ARCHITECTS – Community Based Work

We are seeking AIA member architects to help us grow our property assessment and conceptual design business.

We provide architects with:

- business referrals
- a consulting fee that is a significant proportion of the fee we charge the client
- insurance cover relevant for this work
- the support of introductory and ongoing standards/procedures, with specialist induction training – some provided face to face.

We find that this work enhances the skills of architects and can build significant goodwill in their respective businesses.

Archicentre Australia is a growing business with long standing history and significant goodwill around Australia. We provide introductory and independent architectural services to the public – including property assessment (including pre-purchase review), design feasibility, defect advice and dilapidation reporting. We have implemented an on-line platform to support future growth. This includes a public website, a member only booking system/reporting portal and resource portal for participating architects.

The public parts of these facilities can be seen at: [www.archicentreaustralia.com.au](http://www.archicentreaustralia.com.au)

If your architectural practice could benefit from a flow of client introductions and the support of ongoing professional development, contact us to discuss this opportunity. To arrange a discussion and consider completing our induction process, contact us at:
